

Test Closure Report – API Testing

Scope: Admin APIs + Customer APIs (Auth – API Keys – Customers – Customer Groups – Sales Channels – Carts – Orders – Payment Providers – Payment Collections – Currencies)

1. Introduction

This Test Closure Report summarizes the full testing cycle executed for **Admin APIs** and **Customer APIs**, covering validation of functional, negative, business logic, and error-handling scenarios.

A total of **297 Test Cases** were executed across all modules.
This report includes:

- Execution summary
 - Passed/Failed/Blocked distribution
 - Root causes
 - Risks
 - Release recommendation
-

2. Test Execution Summary

Item	Count
Total Test Cases Executed	297
Passed	267
Failed	20
Blocked	10
Not Executed	0
Execution Status	Partially Successful

3. Summary by Module

Below is the full coverage of all modules tested:

Module	Number of TCs	Passed	Failed	Blocked
Valid Auth – Admin	20	17	1	2
Invalid Auth – Admin	16	15	1	0
Valid API Keys – Admin	26	0	0	0
Invalid API Keys – Admin	17	12	5	0
Valid Customers – Admin	37	36	1	0
Invalid Customers – Admin	19	14	5	0
Valid Customer Groups – Admin	22	22	0	0
Invalid Customer Groups – Admin	14	12	2	0
Valid Sales Channels – Admin	23	23	0	0
Invalid Sales Channels – Admin	14	11	3	0
Valid Auth – Customer	15	15	0	0
Invalid Auth – Customer	12	12	0	0
Valid Cart – Customer	10	10	0	0
Invalid Cart – Customer	6	6	0	0
Valid Orders – Customer	10	6	0	4
Invalid Orders – Customer	8	4	0	4
Valid Currencies – Customer	8	8	0	0
Invalid Currencies – Customer	4	4	0	0
Valid Payment Collection – Customer	6	6	0	0
Invalid Payment Collection – Customer	4	3	1	0
Valid Payment Providers – Customer	3	3	0	0
Invalid Payment Providers – Customer	2	1	1	0

4. Failed Test Cases Summary (18 Failed)

Failure Categories:

- Wrong HTTP Status Codes → **14 Cases**
- Internal Server Errors (500) → **6 Cases**
- Missing Response Fields → **2 Cases**
- Wrong Error Messages → **2 Cases**
- Invalid business behavior → multiple cases

Key Issues per Module

Auth – Admin

- Reset password returns **Created** with **no token**
- Unregistered email returns **201 instead of 401**

API Keys – Admin

- Invalid ID returns **200 instead of 404**
- Sales-channel invalid ID → **500 Internal Server Error**
- Update/Delete invalid ID → **200 OK**

Customers – Admin

- Missing addresses property
- Creating customer with existing email returns **200 instead of 400**
- Wrong error message returned
- Wrong ID returns 200 OK

Customer Groups – Admin

- Invalid deletion returns **200 instead of 404**
- Wrong group ID returns **200 instead of 400**

Sales Channels – Admin

- Invalid ID returns **200 instead of 404**
- Invalid product add/remove returns **200 OK**

Payment Collection

- Invalid collection ID returns **500 instead of 404**

Payment Providers

- Wrong region ID returns **200 instead of 400**

5. Blocked Test Cases Summary (12 Blocked)

Auth – Admin (2 Blocked)

- Update password flow requires registration token → **token missing**
- Performance test also blocked because base flow broken

Order Transfer Module (10 Blocked)

All transfer endpoints blocked due to:

- Complex setup not supported
- Missing valid order IDs
- Incorrect test environment for multi-store scenario
- API not responding or incomplete implementation

Blocked cases:

- Accept Transfer (valid/invalid)
- Cancel Transfer (valid/invalid)
- Decline Transfer (valid/invalid)
- Request Transfer (valid/invalid)

6. Defect Categorization

Defect Type	Count
Incorrect Status Codes	14
Internal Server Errors (500)	6
Missing Required Fields	2
Wrong Error Message	2
Broken Business Logic	2
Missing Dependencies / Blockers	12

7. Defect Severity Distribution

Severity	Count
Critical	22
Major	8
Minor	0

Overall: System stability is **low**, with high-risk defects blocking major flows.

8. Risks Identified

Risk	Impact
Returning 200 OK on failed operations breaks frontend behavior	High
Internal server errors expose internal logic	High
Missing reset-password tokens blocks core authentication flows	Critical
Order transfer module completely unusable	Critical
Lack of validation for invalid IDs	High
Non-standardized error messages	Medium
API response body inconsistent across modules	Medium

9. Recommendations

Must Fix Before Release

1. Implement consistent ID validation for all endpoints
2. Fix error-handling middleware to avoid 500s
3. Standardize HTTP response codes
4. Implement missing "token" generation for reset-password
5. Fix order-transfer API chain before retesting
6. Add proper response message formatting

Should Do

- Add backend logging for exception tracking
- Add unit tests for negative scenarios
- Improve Postman test data setup for Orders module

Next Steps

- Fix all Critical defects
 - Perform **full regression testing**
 - Re-test all blocked cases
 - Run performance validation again
-

10. Conclusion

The system is **NOT READY** for production release.

Reasons:

- 18 Failed test cases (including critical business logic defects)
- 12 Blocked test cases (core feature broken)
- Incorrect status codes across multiple modules
- API module inconsistencies
- Critical authentication flow broken

Final Release Recommendation: **REJECTED**

A full bug-fixing cycle + regression pass is required before launch.
