

Test Closure Report — Manual Testing

1. Introduction

- **Project Name:** MedusaJS E-Commerce Platform
 - **Testing Type:** Manual Functional & UI Testing
-

1. Executive Summary

Module / Area	Total Test Cases	Pass	Fail	Blocked
User Registration, Authentication, Password Reset	105	38	38	29
Cart & Checkout & Payment Gateway	96	59	14	23
Customer & Admin Orders & Reporting	96	28	5	63
Product Management	100	80	7	13

Overall Status: Fail / Blocked – Retesting required after fixes and environment availability.

2. Objectives

- Validate **core functionalities** across registration, authentication, password management, e-commerce cart, checkout, payment gateway, orders, reports, and product management.
 - Test **boundary conditions, input validations, security constraints** (SQL injection, XSS, weak passwords, payment injection), and **UI/UX feedback**.
 - Ensure proper **error messages, system behavior, and data consistency**.
-

3. Key Observations / Findings

1. Validation & Functional Gaps

- Registration: phone, email, name, and password validations failing.
- Checkout: name, phone, postal code validation inconsistent.
- Product management: HTML/unicode, session, search, import failures.

2. Security Issues

- SQL injection, XSS, weak password handling.
- Payment gateway injection and concurrency could not be fully tested due to blocked flows.

3. UI/UX Issues

- Missing error messages, password strength indicators, confirmation emails, dashboard views, catalog visibility.

4. System Behavior

- Account lock/unlock, backend failures, session expiry not handled.
- Cart badge counts, order filters, reporting modules mostly unavailable.

5. Blocked Scenarios

- Password reset, online payment, reporting dashboards, product management workflows, and order management UI elements blocked.

4. Recommendations

1. Critical Security Fixes:

- SQLi, XSS, weak passwords, dictionary attacks – prioritize fixes.

2. Validation & Functional Fixes:

- Registration, password, checkout, product creation, order management.
- Enforce proper field formats, min/max lengths, and consistency.

3. UI/UX Improvements:

- Display error messages, strength indicators, confirmation emails.

- Ensure product catalog, order filters, and dashboards are accessible.
 - 4. Environment / Access Fixes:**
 - Enable Admin access to Product Management module.
 - Enable online payment flows for testing.
 - 5. Retesting:**
 - All blocked and failed test cases to be re-executed after fixes.
-

5. Metrics Overview

Metric	Value
Total Test Cases	397
Pass	205
Fail	64
Blocked	128
Test Pass %	51.6%
Test Fail %	16.1%
Test Blocked %	32.2%
Defects Reported	192
Critical / High Severity	82
Medium / Low Severity	110
